

Job Posting

Data Integrator / Web Developer

Job Description

This role will help design and maintain related data integration activities within various resources. This role is responsible for monitoring the data flow, maintaining interoperability of data and software iterations, and collaborating with team members to identify direction for business operation maturity. This role will provide data consistency and validity across multiple platforms of the electric and communication utilities, driving our fiber based broadband technology beyond Forked Deer's high standards for delivery of services to our members/subscribers.

The capable candidate will demonstrate problem-solving skills and knowledge of integration best practices which are critical to successful implementation of business rules, data analytics, supporting business decisions, and representation of KPI metrics. This role requires attention to detail and a logical mindset to complement our team and support DevOps for project planning.
